

Red Hook Hub Online

GitHub

ankestohlmann/redhookhub

Hosting

- may 1st
- namecheap

Front-end development

- translation of design into code (template WP Shower - responsive?)
- responsive layout
- expanded post (WP or JQuery)

user:

- input data fields/submit for user (secondary input system, not dashboard - user submittal plugin, form plugin)
 - preview of post/flyer
 - print flyer (WP: no, javascript plugin)
 - display message feed
 - add event to user's calendar (WP: events manager, exports to other calendars)
 - RSS sign-up - raw jason
 - Log In/Sign Up ... Sign Up via Gmail/Facebook/Twitter
-
- emergency override of top banner

Back-end development

- connection to database
- turning input data into post, printable flyer, entry on calendar
(*applies to classes, events, or meetings*)
- official RSS feed, turn into email (mail chimp)
- categorize data
- database, with categories
- emergency override of top banner

admin:

- system to elevate messages: option to star, delete message ... later make message official
- create emergency override (manual override???)
- print weekly list, send it to LED Ticker, home official section, social media/twitter, Facebook group

Ideas

- Instagram: add photo tile
- GoggleGoggles: take photo turns into text

- Weekly email: need images? ... down the road: add photos and test, if more click throughs ... worth adding photos/time to coordinator's workload (1 hr a week?)
- Mail chimp for weekly email and other Hub emails
- have a vetting process before people can post: 1. is it RH related, 2. is it in the next 2 wks, 3. ...
- hide instead of delete
- user base established: review click rates / analyze what is relevant to community / review guidelines for what makes it into "official list"
- need WP developer
- Post anonymously: need to be approved by moderator / 72hr turn around

Need:

hosting info, install WP

can get 80% there

- need jQuery developer
- need WP developer for advanced/backend stuff
